ACADEMIC PROJECTS

Cocoon

August 2023 — December 2023

Skills: TransScript, Next.js, Redux, AWS Lambda, Amazon Textract, OpenAI API, LangChain, PostgreSQL

AI-driven app designed to help you switch careers seamlessly.

- Developed a document parser that extracts text from PDF, DOCs, and Google Docs.
- Obtained an API from Q.Net online service and utilized an OpenAI function to create a semantic search feature that identifies matching keywords.
- Used an OpenAI function calling model to build a converter that transforms text into structured data.
- Leveraged an OpenAI embedding model to create a semantic search feature that identifies relevant Udemy courses, suggesting users take them to successfully transition into their desired jobs.

Bucketed

December 2022 — April 2022

Skills: JavaScript, Prisma, Cloudinary, Express, EJS, Passport

SNS platform, a space where users can share their bucket list, lend support to others, and keep track of their progress. Users also have the option to share their accomplishments through photos and posts.

- Developed an interactive SNS platform where users can share bucket lists, offer support, and track progress.
- Leveraging JavaScript, Prisma, Cloudinary, Express, EJS, and Passport, users can also share accomplishments through photos and posts.

EDUCATION

Full Stack Web Development, British Columbia Institute of Technology, Vancouver

September 2022 — April 2024

The BCIT Full Stack Web Development program includes courses on HTML, CSS, JavaScript, Node.js, React, and more. I also gained experience with agile software development methodology and cloud-native application development.

Bomon Academy, Seoul, Korea

October 2020 — October 2021

- I studied at Bomon Academy, a prestigious institution recognized for its programs aimed at fostering future news anchors and program MCs.
- This education underscored the importance of empathizing with the audience's viewpoint - a skill that has been invaluable in my role as a Full Stack Developer.

The Bachelor of Arts (B.A.) Major in Psychology , University of British Columbia, Vancouver

September 2014 — May 2020

Through the UBC Bachelor of Arts (B.A.) major in Psychology, I gained an extensive understanding into the science of human behavior, cognition and emotion. The program covered the history and development of psychology as well as equipped me with the skills to understand others and work effectively in group settings.

INTERNSHIPS

Full Stack Developer at Bulletproof Studio Tools, VANCOUVER

January 2024 — April 2024

- I was tasked with implementing new GraphQL queries and mutations. As part of this role, I also aligned these with their respective resolvers. This important task ensured the smooth retrieval and safe storage of data vital for our application's operation.
- For the front end, I used Typescript and React, to make our application more user-friendly and intuitive.

- I used Apollo Client for state management due to its comprehensive features that facilitate efficient data management in the client-side of our GraphQL applications.
- In terms of user interface, I utilized Material UI, a popular React UI framework, for developing our application's timesheet management features. These features provide our users with an intuitive and easy-to-use interface, where they can view their existing timesheets and add new ones with ease.

Full Stack Developr at Plainstage, VANCOUVER

Transitioned the React client application from Create-React-App (CRA) to Vite to improve the production builds and streamline the development process. Utilized JavaScript, Vite, and Express.js for the implementation of Static Site Generation (SSG) with dynamic Open Graph meta tags, enhancing social media sharing and Search Engine Optimization (SEO).
